The Roadmap to Close the Gap for Vision

Vision loss is 11% of the Indigenous health gap. The $70m Roadmap to eliminate vision loss would be only 4% of the $1.6bn allocated in 2009-2013 to Close the Gap.

April 2013

THE UNIVERSITY OF MELBOURNE

This summary report was prepared by Professor Hugh R Taylor AC, Andrea Boudville*, Mitchell Anjou* and Robyn McNeil* of the Indigenous Eye Health Unit, Melbourne School of Population and Global Health, The University of Melbourne.

We acknowledge and thank the many community members, colleagues and stakeholders who have been consulted and participated in the development of these recommendations.

This report summarises and develops the findings and recommendations presented in the following reports:

Taylor HR, Anjou MD, Boudville AI, McNeil RJ. **The Roadmap to Close the Gap for Vision: Full Report.** Melbourne: Indigenous Eye Health Unit, Melbourne School of Population Health, The University of Melbourne, ISBN 978073404756 4; 2012.

Introduction

The provision of good quality eye services is a fundamental part of improving the health of Indigenous Australians. This report forms the third step of the Indigenous Eye Health Unit's aim to "Close the Gap for Vision", following the National Indigenous Eye Health Survey which outlined the extent of the problem and studies of the availability and quality of eye health services. Now we make recommendations for policy change to improve the quality and sustainability of eye care services.

In many areas and regions of Australia, successful eye care programs have been developed that provide high quality eye care for Indigenous Australians. We acknowledge these successes and aim to build on and enhance these existing services. The report is based on 2008 quantitative data collected in the National Survey but since then there have been a number of significant changes to the Visiting Optometrists Scheme and Medical Specialists Outreach Assistance Program.

The Roadmap addresses primary eye care, refractive services, cataract, diabetic eye disease and trachoma. It includes cost estimates for the Commonwealth and State/Territory Governments. It builds on community consultation and control, the regional delivery of services and the National Health Reforms. It stresses the assessment of population based needs, strong co-ordination, monitoring of performance and national accountability. It does not include implementation details, phase in costing or additional or replacement costs for infrastructure or equipment.

Highlights

- Blindness rates in Indigenous adults are 6 times the rate in mainstream
- 94% of the vision loss is preventable or treatable but 35% of Indigenous adults have never had an eye exam
- **Eye services need to be increased in remote areas and their utilisation increased in all areas**
- **Efficient eye care requires co-ordination along the pathway of care**
- **Trachoma control needs to include all endemic areas and be continued until it is eliminated**
- **Eye services require monitoring and evaluation of agreed performance indicators by a nationally accountable body**
- **This Roadmap to eliminate unnecessary vision loss consists of 42 specific interlocking recommendations**
- **This Roadmap requires additional capped funding of $19.5 million each year**
- **Provision of adequate co-ordination will yield tremendous increases in efficiency and dramatically improve patient outcomes**
- **With only a doubling of funding, Cataract surgery will increase 7 times, diabetic examinations 5 times and glasses use 2.5 times**
- **The $70m to fully implement the Roadmap would be only 4% of the $1.6bn allocated in 2009-2013 to Close the Gap**

Current Status of Indigenous Eye Health

The 2008 National Indigenous Eye Health Survey determined the magnitude, distribution and causes of vision loss in Aboriginal and Torres Strait Islander people.

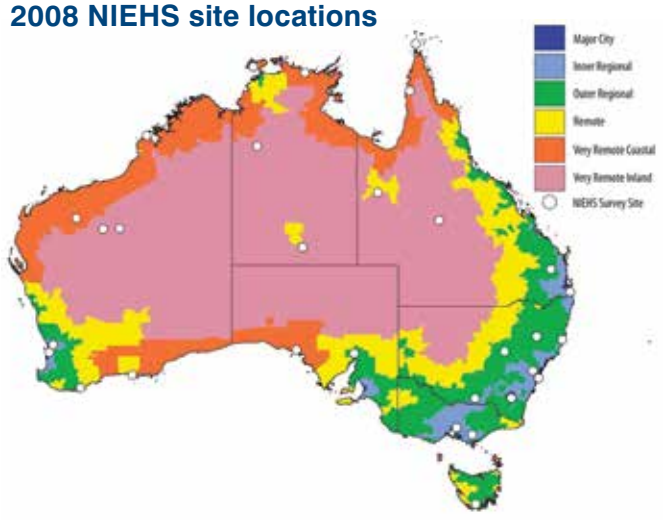
It examined 1694 children (5 – 15 years) and 1189 adults (40 years and over) in 30 sites across the country.

Indigenous children
> better vision than mainstream

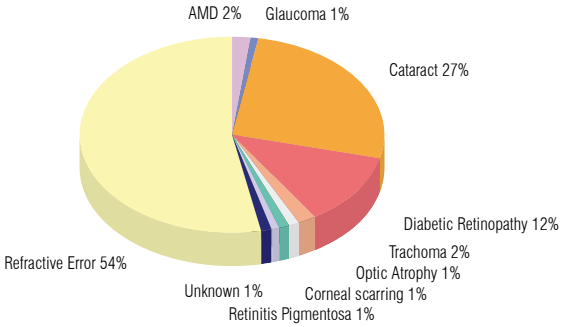
Indigenous adults
> 6 times as much blindness

> 94% of vision loss was unnecessary and is preventable or treatable

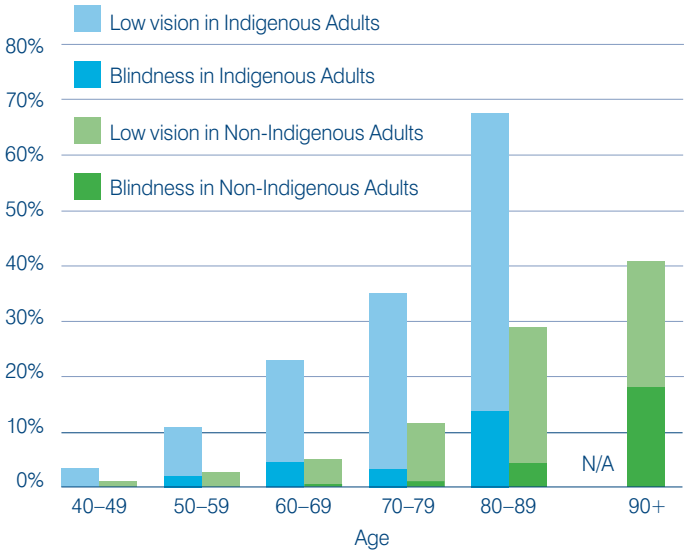
2008 NIEHS site locations



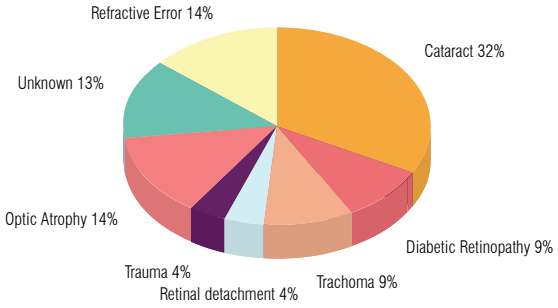
Low Vision (<6/12) in Indigenous Adults



Vision Loss in Adults



Blindness (<6/60) in Indigenous Adults



Crude Prevalence Rates of Vision Loss in Indigenous Australians

State	Children		Adults	
	Low Vision	Blindness	Low Vision	Blindness
NSW	3.3%	0.4%	5.7%	2.4%
NT	0.8%	0%	9.1%	3%
QLD	0.9%	0.3%	11.6%	0.4%
SA	0%	0%	9.3%	1.6%
TAS	0%	0%	4.7%	0%
VIC	0%	0%	6.9%	6.9%
WA	1.9%	0.2%	12%	1.8%

Regions	Children		Adults	
	Low Vision	Blindness	Low Vision	Blindness
Major City	4.5%	0.6%	7.7%	2.6%
Inner Regional	2.6%	0%	7.8%	2.4%
Outer Regional	1.5%	0%	6.6%	0.6%
Remote	0.9%	0%	10.2%	0.8%
Very Remote Coastal	1.1%	0.3%	9.5%	1.1%
Very Remote Inland	0.3%	0.3%	12.7%	3.9%
TOTAL	**1.5%**	**0.2%**	**9.4%**	**1.9%**

Rates of vision loss do not show significant jurisdictional or regional variation – the need for eye care is nationwide

Four conditions cause 94% of the vision loss. Each is readily amenable to treatment

Key Finding	Implications
1. Refractive Error	
› Only 20% of Indigenous adults wear glasses for distance compared to 56% in mainstream › Lack of reading glasses meant that 39% could not see normal print › An optometrist working in Aboriginal Health Service led to much better outcomes	› Readily accessible eye services are needed for all Australians › More and better co-ordinated visits by optometrists or ophthalmologists are required in more remote areas › Better co-ordination and links between Aboriginal Health Services, clinics and hospitals are needed in urban areas
2. Cataract	
› Blinding Cataract is 12 times more common in Indigenous adults › But rates of Cataract surgery are 7 times lower › Waiting time for Cataract surgery is 88% longer than mainstream › Indigenous Australians are 4 times more likely to have to wait for more than 1 year for Cataract surgery	› Cataract surgery needs to be made readily available for all Australians › Adequate and sustainable funding is required for visiting specialist services › Proper funding for patient travel to regional hospitals for surgery is required › Adequate surgical facilities, time and staff must be committed for Cataract surgery › Excellent co-ordination is required between the patient, community, clinic, hospital and the surgical team
3. Diabetes	
› 37% of Indigenous adults have diabetes and 13% have already lost vision › 98% of blindness from diabetes is preventable with early detection and timely treatment › Only 20% have had an eye exam in the last year › Only 37% needing laser surgery have received it	› All Indigenous people with diabetes need an eye exam every year and better access to diabetes education › Good co-ordination and recall mechanisms are needed › Sustainable funding (Medicare) is required for retinal photography › Prompt referral is required for those found to have diabetic eye disease › Laser surgery should be available locally but good quality slit lamps and portable lasers are needed
4. Trachoma	
› Two thirds of remote communities have endemic Trachoma › Adults with Trachoma scarring and in-turned lashes (trichiasis) are found across the country › Trachoma can be eliminated with the SAFE Strategy (see pages 6-7)	› The extent of Trachoma needs to be mapped clearly › All children at risk need to be checked regularly › Elderly people across the country need to be checked for in-turned lashes (trichiasis) and operated on if necessary › Trachoma elimination programs need to be fully implemented in endemic areas

Vision loss causes 11% of the health gap.

It is behind cardiovascular and diabetes, equal with trauma but ahead of alcoholism and stroke.

Most vision loss can be corrected overnight.

Co-ordination of Eye Care

Levels of Eye Care

For the purposes of this report, we have taken the following definitions:

Primary Eye Care (Community Clinic: GP, RN, AHW, co-ordinator)

- Test near and distant vision as part of the Adult Health Check
- Make sure no person with diabetes goes for more than one year without an eye exam
- Diagnose and treat conjunctivitis, corneal foreign bodies, minor ocular trauma
- Maintain patient records
- Diagnose and refer more complex cases, trichiasis
- Trachoma control activities, screening, treatment, health promotion
- Follow up and assist post-operative and ongoing treatment

Secondary Eye Care (Eye Team or Clinic: Optometrists, Ophthalmologists, support staff, co-ordinator)

- Diagnose and treat Refractive Error
- Diagnose and refer Cataract surgery
- Diagnose and refer/treat Diabetic Retinopathy, trichiasis
- Refer more complex cases requiring investigation

Tertiary Eye Care (Regional Hospital: Ophthalmologists, theatre and clinic staff, co-ordinator)

- Perform Cataract surgery, laser treatment and other eye surgery
- Provide local primary and secondary care

Delivery and Co-ordination of Eye Care Services for 10,000 people

Optometry		Full Time Equivalent
Number requiring glasses exam	640	
Number requiring diabetic exam	962	
Number for other eye exams	98	
Total Optometry exams	**1,700**	**1.0**
Ophthalmology		
Number requiring diabetic laser	112	
Number of Cataract surgeries	95	
Number of trichiasis surgeries*	36	
Total Ophthalmology referrals	**243**	**0.3**
Co-ordination		
Patient liaison (appointments etc.)	3.7	
Patient transport	1.8	
Organising eye clinics	1.3	
Organising hospital	0.1	
Eye clinic support (excludes surgery)	1.5	**8.3**

The workforce requirements for delivery and co-ordination of eye care services can be calculated based on the national prevalence of eye conditions and the estimated workforce required to co-ordinate and deliver the services. (Note that this estimation does not include State/Territory and National co-ordination or travel time for optometrists and ophthalmology services)

*** not necessarily required in all regions**

The Patient Journey

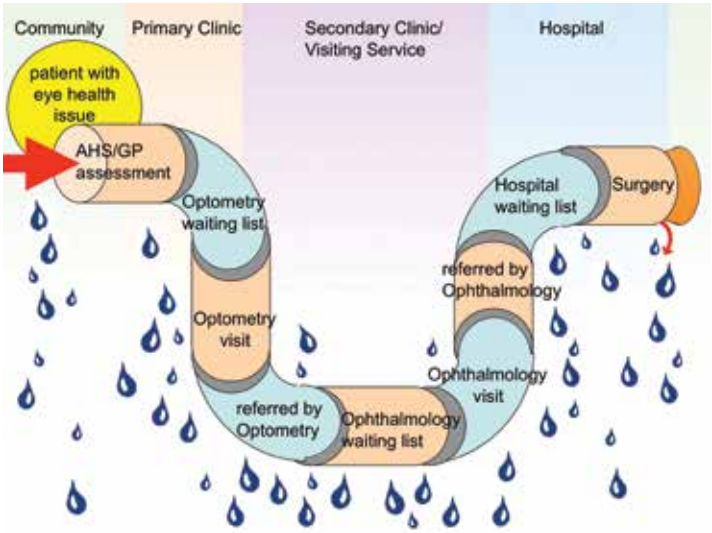
Successful eye health outcomes involve co-ordination of both eye care services and the patient journey

The referral pathway is a leaky pipe with a blockage at its end

It is often very inefficient and wasteful of services

Many people drop out

Because of this, others do not enter



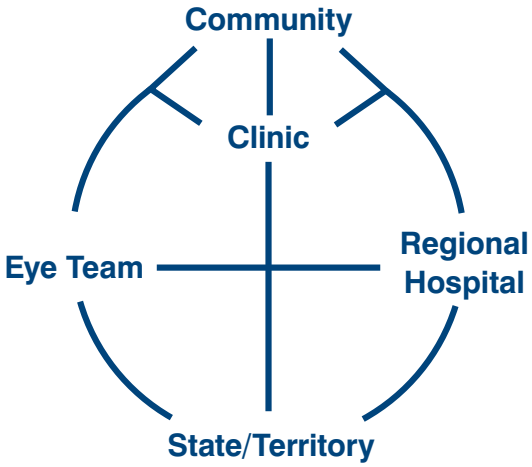
Levels of Co-ordination

Community

> Community liaison provides a vital link between individual community members, their families and the clinic and its services
> This may include identification, transport, interpretation, translation and moral support

Clinic, Primary Eye Care

> Referral of more complex cases to visiting eye team
> Maintenance of patient records and referral lists for visiting eye team
> Scheduling of visits by visiting eye teams
> Co-ordination with other visiting specialists
> Co-ordination of exam rooms, accommodation, equipment and local staff
> Make arrangements for referrals to Regional Hospital
> Schedule follow up visits as required



All components are interlinked and require co-ordination

Eye Team, Secondary Eye Care

> Co-ordination of visits with clinic and community
> Update patient records as necessary
> Communication and co-ordination between visiting optometrists and ophthalmologists
> Mechanism for communication and co-ordination with other visiting specialists
> Specific equipment items brought with team (e.g. lasers, slit lamp)
> Organise a list/ information about patients waiting to be seen
> Assistance with patient identification, transport, translation, explanation and support
> Clerical support for forms and paper work
> Referral systems for further management or surgery

Regional Hospital, Tertiary Eye Care

> Organisation of the clinic space, theatre time, staff, accommodation, travel and surgical supplies for the visiting eye teams
> Co-ordination with other visiting specialists
> Organisation and supply of surgical equipment
> Co-ordination of patients who require surgery with community and clinic
> Organisation of travel and other arrangements for patients

National/State/Territory

> Co-ordination of other specialist and allied health visits with the visiting eye team
> Oversight of co-ordination performed at different levels, recruitment, training and support
> Oversight of distribution of visiting eye teams (and other specialists) including ratio of optometric and ophthalmic visits and frequency of visits

Trachoma

- Trachoma is a major blinding infectious eye disease
- It occurs in areas with poor hygiene and living conditions
- Australia is the only developed country to still have Trachoma
- Blinding endemic Trachoma occurs in 60% of outback communities
- Late scarring and in-turned eyelashes (trichiasis) affects 1.4% of older Indigenous people across the country
- Trachoma is still the fourth leading cause of blindness

The National Trachoma Surveillance and Reporting Unit (NTSRU) has collected data since 2006

Data collection is still far from complete

Not all at-risk communities have been examined

Endemic areas need to be mapped fully

The SAFE Strategy is not fully implemented

Trachoma screening is often incomplete

Trichiasis screening is often forgotten

Treatment is often not given

Clean faces campaign and health promotion is incomplete

Trachoma can be prevented with WHO's SAFE Strategy:

Surgery for trichiasis

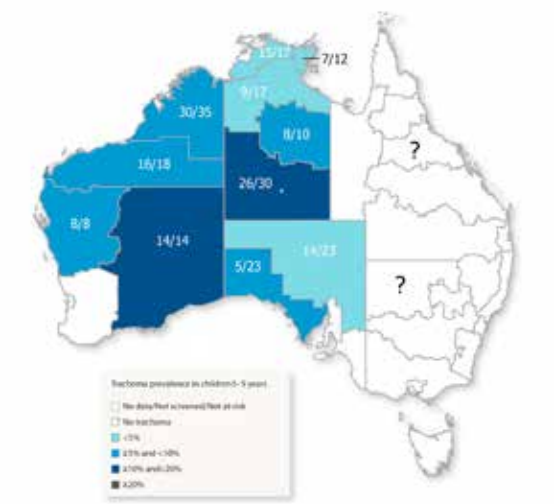
Antibiotic (Azithromycin) treatment

Facial cleanliness and

Environmental improvements

WHO and all Governments including Australia have committed to the Global Elimination of Trachoma by 2020 (GET 2020).

Trachoma Prevalence in Indigenous Children



Trachoma prevalence in children aged 5-9 years and number of communities screened/ number of at risk communities in 2011

Reprinted from 2011 Report of NTSRU

Regional education and health promotion material

Milpa
The Trachoma Goanna

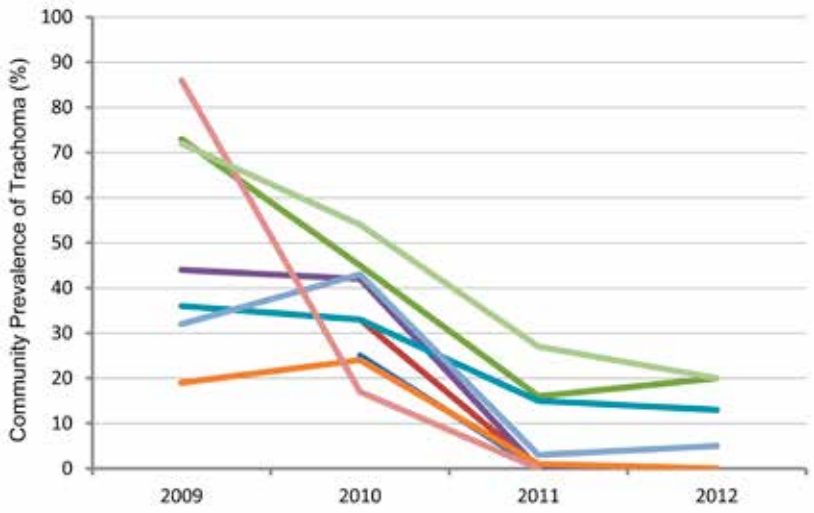
In 2009 the Australian Government committed to eliminate Trachoma in Australia

Current Activities:

- Prime Minister Rudd committed $16m (2009-2013) to start the elimination of Trachoma
- Implementation could have been faster, but once started great progress has been made, especially in the Northern Territory and Western Australia
- More communities have been screened
- More children have been examined
- Treatment coverage has improved
- Health education materials have been widely used
- “Clean faces, strong eyes” campaign is underway
- AND Trachoma rates are starting to fall

When the SAFE Strategy is properly implemented Trachoma rates show marked declines

Community prevalence of active trachoma in one region in the Northern Territory (de-identified data; each coloured line represents a separate community)



What is needed now:

- Funds to finish the job and eliminate Trachoma
- Current Commonwealth funding ends in mid-2013 and continued funding is required
- $17.4m is required to continue the SAFE program 2013-2016
- A further $5.4m is required for surveillance 2017-2020

Why Eye Care is Important

Doing Something about Vision Loss and Eye Health is Important

Vision loss is common

- Most common self-reported health complaint
- Blindness rates are 6 times higher
- Blindness from Cataract is 12 times higher, surgery 7 times less

Vision loss has a big impact

- 11% of Years of Life Lost to disability for Indigenous people
- Equal 3rd leading cause of the Gap for health
- Increases mortality rates by at least 2 fold
- Significantly affects the individual, family and community

Vision loss is discrete and fixable

- Cataract surgery restores vision overnight and costs ~$3,000 per QALY
- New glasses improve vision right away
- Diabetic blindness, 98% is preventable and screening costs $15,000 per QALY
- Trachoma can be eliminated with the SAFE Strategy

Vision loss provides a template for other specialist health care

- Requires active community engagement
- Requires good integration into primary health care
- Needs proper co-ordination within a regional basis
- The lessons learnt will help link other specialist services with comprehensive primary care

The Indigenous Eye Health recommendations were developed following the guiding principles and the frameworks set out in:

- National Strategic Framework for Aboriginal and Torres Strait Islander Health 2003-2013;
- Cultural Respect Framework for Aboriginal and Torres Strait Islander Health 2004-2009;
- Aboriginal and Torres Strait Islander Health Workforce National Strategic Framework 2002;
- National Partnership Agreement on Closing the Gap in Indigenous Health Outcomes 2009-2013;
- National Health Reform Delivering Outcomes for Australians 2011;
- National Aboriginal and Torres Strait Islander Health Data Principles 2006:
- National Aboriginal Community Controlled Health Organisation guiding principles;
- National Framework for Action to Promote Eye Health and Prevent Avoidable Blindness and Vision Loss 2005;
- Aboriginal and Torres Strait Islander Health Performance Framework 2006.

Nine False Reasons for Not Addressing Blindness

Vision loss is not important in Indigenous communities:

- Vision loss is the equal third leading cause of the Gap in health after heart disease and diabetes but ahead of trauma, stroke and alcoholism. Indigenous adults have six times more blindness than mainstream.

Blindness does not kill people – we need to address the life threatening things:

- Even mild vision loss (<6/12) increases the risk of dying 2.6 times in mainstream Australia. Vision loss from Trachoma in African communities increases the risk of dying by 6.8 times. Mild vision loss prevents independent healthy living.

Eye care is body part medicine, it is not holistic:

- The patient's journey for eye care starts in properly developed, comprehensive primary health care and requires seamless linkage with specialist services. Lessons learnt from integrating specialist eye care visits will inform ways to improve the linkage of primary care and specialist care.

There are many other more pressing priorities than eye care:

- It is true that there are many health priority areas but 94% of vision loss is unnecessary and much or it can be rapidly reversed. A pair of glasses or Cataract surgery can eliminate vision loss overnight, whereas other chronic diseases (diabetes, heart disease, alcoholism) cannot be reversed overnight.

It is not worth spending the money on eye care, it is too expensive:

- In fact, eye care is extraordinarily cost effective, for example Cataract surgery costs $3,000 per QALY and Diabetic Retinopathy examinations $15,000 per QALY. In Australia, each $1 spent on eye care yields a $5 return.

We are already spending too much on Aboriginal health and the money is wasted:

- It is true we now spend $1.39 on Indigenous health for each $1 spent on mainstream. (A decade ago it was $0.80 for Indigenous health). As there is three times the morbidity (and vision loss), one would expect to spend at least three times as much even if delivery costs to remote areas were not higher than urban areas. In terms of Cataract surgery, seven times less surgery is done for Indigenous people.

There are not enough specialists to provide the care required:

- The actual increase in the number of optometric and ophthalmic services required is quite small and with the appropriate co-ordination and resources, many specialists are willing to take on this work.

This plan or roadmap is too complex, it is not all necessary:

- Over the last 30 or so years multiple proposals have been made to address Indigenous eye health. None have worked properly as they overlooked different criteria. This roadmap has been based on a careful review, new evidence and wide consultations. Each element is interlocked forming an integral chain. It will also provide a template for the delivery of other specialist services to primary care services.

There is no more money to spend on Indigenous health:

- With a relatively small increase in expenditure, there will be a huge increase in efficiency and reduction in waste for Indigenous eye health services. A doubling in funding will increase glasses use by 2.5 times, diabetes eye exams by 5 times and Cataract surgery by 7 times.

Guiding Principles

The following Guiding Principles have been selected to underpin the recommendations outlined in The Roadmap to Close the Gap for Vision:

Evidence based
Data are utilised to support better planning and delivery of services to improve eye health outcomes

Engage Community
Service providers work in consultation with communities to facilitate planning, design and delivery of acceptable services that respond to population requirements and individual needs

Integrated with primary health care
Specialist eye health services work together with primary health services to respond to community needs for services

Access in mainstream
Within the health system both ACCHOs and mainstream services work in partnership to ensure that Aboriginal and Torres Strait Islander people are able to access mainstream services for comprehensive eye health care

Population based
Service providers are adequately funded to organise services based on the projected eye health care needs of each community

Appropriate and quality services
Aboriginal and Torres Strait Islander people are able to access locally available and affordable, comprehensive and co-ordinated, high quality eye health care that is provided by culturally competent eye health workforce

Accountability
All services are provided through effective use of eye health funds by ACCHOs and mainstream health services. The collection, analysis and review of eye health data and service information are regularly conducted to ensure ongoing relevance to improving service delivery and eye health outcomes

Efficient use of resources
Reduce unnecessary waste and duplication of services and effort so as to optimise the outcome of each occasion of care

Outline of Recommendations for Indigenous Eye Health

1. **Primary Eye Care as Part of Comprehensive Primary Health Care**
   To improve identification and referral for eye care needs from primary health care
2. **Indigenous Access to Eye Health Services**
   To enhance access to Aboriginal and mainstream eye services
3. **Co-ordination and Case Management**
   To improve co-ordination of eye care services and the successful navigation of referral pathway
4. **Eye Health Workforce**
   To increase availability and improve distribution of eye health workforce
5. **Elimination of Trachoma**
   To eliminate blinding Trachoma from Australia
6. **Monitoring and Evaluation**
   To capture and report information about progress and improvement of services and outcomes in Indigenous eye health
7. **Governance**
   To ensure that there is national delivery of 'Close the Gap for Vision'
8. **Health Promotion and Awareness**
   To improve awareness and knowledge of eye health in communities to support self-empowerment
9. **Health Financing**
   To ensure adequate funding is allocated to 'Close the Gap for Vision'

Recommendation Heat Map

to illustrate the relative contribution of recommendations to guiding principles and reinforce the interdependence between components of the Roadmap

		Evidence based	Engage community	Integrated with primary health care	Access in mainstream	Population based	Appropriate and quality services	Accountability	Efficient use of resources
1	**PRIMARY EYE CARE AS PART OF COMPREHENSIVE PRIMARY HEALTH CARE**

Contribution to guiding principles	**1**

Roadmap Recommendations

1 PRIMARY EYE CARE AS PART OF COMPREHENSIVE PRIMARY HEALTH CARE
to improve identification and referral for eye care needs from primary health care

INTENTION	RECOMMENDATION	OUTCOME
1.1 Enhancing eye health capacity in primary health services		
To ensure primary care staff (first point of contact) understand and include the appropriate basic eye checks and referral in routine screening/evaluation.	**That further education programs be developed and implemented to improve understanding of basic eye health among primary health care professionals and Aboriginal Health Services.**	Basic eye health is routinely incorporated as part of comprehensive primary care and patients with eye conditions are appropriately referred.
1.2 Health assessment items include eye health		
To ensure that vision and eye health is regularly assessed as part of primary screening and general health assessments.	**That primary health care staff know and perform the vision and eye care components that are included in the health assessment forms with appropriate referral as needed.**	Poor vision and eye problems are detected early and referred for further assessment.
1.3 Diabetic Retinopathy detection		
To improve the examination, early detection and referral of Diabetic Retinopathy by providing sustainable funding for retinal photography.	**That a Medicare item be added to MBS to cover the service costs of taking and reading retinal photographs including the use of telemedicine.**	Retinal screening is carried out routinely at primary health care level and Aboriginal Health Services have the capacity and are resourced to offer this service.
1.4 Eye health inclusion in clinical software		
To ensure that primary health care staff are prompted to perform the appropriate eye health assessments as part of routine comprehensive health care.	**That all clinical software packages used in Aboriginal Health Services include eye health checking components and modules consistent with national guidelines.**	Eye health components are integrated into primary health routine patient management systems.

2 INDIGENOUS ACCESS TO EYE HEALTH SERVICES
to enhance access to Aboriginal and mainstream eye services

INTENTION	RECOMMENDATION	OUTCOME
2.1 Aboriginal Health Services and eye health		
To strengthen the provision of eye health services within Aboriginal Health Services and increase their capacity to identify and refer people needing eye care.	**That where possible visiting eye health services, including VOS and MSOAP, are provided within Aboriginal Health Services.**	Increased utilisation of eye health services because they are provided in the culturally safe setting of Aboriginal Health Services.
2.2 Cultural safety in mainstream services		
To ensure that all components of the clinical pathway are culturally-safe including in public hospitals and private eye care, and that all staff appreciate Indigenous health needs and are able to facilitate the Indigenous patient's journey.	**That service providers involved in the co-ordination of eye care including Local Hospital Networks and Medicare Locals, consult with local Aboriginal and Torres Strait Islander communities and improve the cultural awareness of their staff and services.**	All components of clinical pathway including public hospitals and private services maintain environments that give confidence for Indigenous people to safely access services.
2.3 Low cost spectacles		
To ensure cost certainty and to provide acceptable and affordable spectacles in a timely way.	**That nationally consistent Indigenous subsidised spectacle schemes be establish to provide low-cost, quality-assured, cost-certain spectacles to Aboriginal and Torres Strait Islander people.**	People acquire and use the glasses they need because of cost certainty and acceptability leading to increased utilisation of eye services because Indigenous people are confident in obtaining useful glasses.
2.4 Hospital surgery prioritisation		
To address the inequitable Cataract backlog due to inadequate surgical output and to ensure that hospital surgery waiting times are no longer a barrier to Indigenous eye care, and thus facilitate the uptake and flow through the referral pathway.	**That all jurisdictions aim to reduce the waiting time for Cataract surgery recognising Indigeneity and the high level of co-morbidities and improve consistency in clinical assessment categories across jurisdictions.**	The gap for un-operated Indigenous Cataract surgery is eliminated and the surgical pathway is opened because of increased community confidence in services.

3 CO-ORDINATION AND CASE MANAGEMENT
to improve co-ordination of eye care services and the successful navigation of referral pathways

INTENTION	RECOMMENDATION	OUTCOME
3.1 Local eye care co-ordination		
To establish local eye care co-ordination that includes a regional hospital with eye surgical facilities. At a local level there is capacity to provide comprehensive eye care for primary identification and referral for optometry and ophthalmology.	**That mechanisms for local co-ordination of eye care will be established within Local Hospital Networks and Medicare Locals.**	All components of the eye care pathway are co-ordinated in each local region to ensure adequate access and use of comprehensive eye care including surgery.
3.2 Clear pathways of care		
To ensure that patients receive appropriate clinical care with minimal delays and without unnecessary visits by having well documented, understandable and well linked referral pathways.	**That local co-ordination of eye care is developed along with local referral pathways for all eye care services and these pathways are made known to all service providers involved.**	Patients experience a smooth passage throughout and fulfill the referrals required for eye health.
3.3 Workforce identification and roles		
To ensure that within each local area, all the necessary co-ordinating functions in the pathway of care are performed.	**That each local area identifies the (existing or additional) personnel and positions required for the proper co-ordination, organisation and delivery of the patient's journey along the pathway of eye care.**	The patient journey proceeds uninterrupted because the appropriate and culturally sensitive personnel are in place.
3.4 Eye care support workforce		
To ensure that within each local area, the workforce is appropriately skilled and resourced to meet the eye care needs of their community.	**That sufficient people in each local area are appropriately designated, trained and funded to organise and co-ordinate patients along the pathway of care.**	People understand and perform the co-ordination required to facilitate the patient's journey.
3.5 Case management		
To ensure that those with high need for eye care (such as diabetes) receive the necessary eye examinations and that those who are referred for surgery receive that surgery.	**That a case management strategy be established within Aboriginal Health Services for all patients at high need for eye care and/or those referred for eye surgery. For patients who have diabetes, case co-ordination should be provided by chronic disease co-ordinators.**	All patients with diabetes receive an annual eye examination and follow up and all patients referred for surgery receive it.
3.6 Partnership and agreements		
To ensure that the pathway of care is readily navigated and 'leakage' is reduced because all components of the local eye health system work together, communicate, share information and have common understandings and expectations.	**That local co-ordination of eye care builds on partnerships and agreements with local service providers and visiting eye services.**	Based on clear expectations and understandings, local eye care networks work efficiently and effectively.

4 EYE HEALTH WORKFORCE
to increase availability and improve distribution of eye health workforce

INTENTION	RECOMMENDATION	OUTCOME
4.1 Provide eye health workforce to meet population needs		
To ensure that the eye health workforce is sufficient to meet the population based needs of Indigenous Australians.	**That population-based needs analysis is used to determine eye health workforce requirements in all areas of Australia.**	Appropriate numbers of eye health providers are available in all areas of Australia.
4.2 Improve contracting and management of visiting services		
To increase the ease of use of funding for visiting services (MSOAP and VOS), so as to attract more visiting eye team services where needed and to improve co-ordination amongst all service providers.	**That the contracting of VOS and MSOAP be restructured to provide simple, flexible, co-ordinated and transparent operation and management of these services.**	MSOAP and VOS work smoothly and efficiently and that visiting optometry and ophthalmology services are properly co-ordinated.
4.3 Appropriate resources for eye care in rural and remote areas		
To ensure that the appropriate eye health workforce is available in rural and remote areas.	**That the eye health workforce and funding are allocated according to population needs with consideration of existing local services.**	Services in rural and remote areas are adequate to meet the needs for eye care.
4.4 Increase utilisation of services in urban areas		
To increase the accessibility and use of existing optometry services in urban and regional areas by making them available within the culturally appropriate environment of Aboriginal Health Services.	**That Indigenous VOS funding is available for major cities and inner regional areas to support delivery of visiting optometry services in Aboriginal Health Services.**	Increased use of optometry services provided within Aboriginal Health Services.
4.5 Billing for visiting MSOAP supported services		
To ensure cost certainty and remove barriers to local service uptake created by inconsistent and uncertain billing arrangements and the charging of additional fees.	**That visiting ophthalmologists supported by MSOAP agree to bulk-bill Indigenous patients for clinic services and that MSOAP consider loading arrangements to meet the true cost of service.**	Increased use of eye health services because of reduced or removed uncertainty of patient out-of-pocket expenses.
4.6 Rural education and training of eye health workforce		
To encourage newly trained optometrists and ophthalmologists to participate in Indigenous eye care delivery and regard it as a standard part of their ongoing practice and social responsibility.	**That during training, eye health providers complete a core component of rural and Indigenous eye health work. Funding should be specifically provided to cover supervision and trainee costs.**	More optometrists and ophthalmologists have exposure to and actively seek work in rural and remote areas and Indigenous communities.

5 ELIMINATION OF TRACHOMA to eliminate blinding Trachoma from Australia		
INTENTION	**RECOMMENDATION**	**OUTCOME**
5.1 Definition of areas of risk		
To ensure that Trachoma activities are conducted in all endemic areas.	**That the mapping of the extent of Trachoma is completed expeditiously.**	Areas with Trachoma are clearly defined.
5.2 Effective interventions		
To ensure that appropriate Trachoma interventions are properly delivered in endemic areas.	**That the SAFE strategy is fully and comprehensively implemented.**	Active Trachoma is rapidly eliminated from the endemic areas.
5.3 Surveillance and evaluation		
To ensure programs are effective and have the anticipated impact.	**That the ongoing monitoring and evaluation activities of the National Trachoma Reporting and Surveillance Unit should be continued.**	Success and progress are measured and reported.
5.4 Certification of elimination		
To ensure the World Health Organisation certifies the elimination of Trachoma in Australia.	**That Australia works closely with World Health Organisation and participates in the GET 2020 process until Trachoma is eliminated.**	Australia is free of blinding Trachoma.

6 MONITORING AND EVALUATION
to capture and report information about progress and improvement of services and outcomes in Indigenous eye health

INTENTION	RECOMMENDATION	OUTCOME
6.1 Managing local eye service performance		
To provide the appropriate service delivery data to inform local management, and allow aggregation of these data at regional, State/Territory and national levels.	**That local co-ordination of eye care includes Local Hospital Networks and Medicare Locals and collects and reports nationally consistent data on eye health programs, service delivery targets and patient outcomes.**	Local services are improved by monitoring performance and progress is reported nationally and locally.
6.2 State and National performance		
To provide State/Territory and national assessment of performance to assist local programs and provide accountability.	**That local service delivery data be aggregated to provide State/Territory performance information and that this information is aggregated to provide national information.**	Service delivery performance data are appropriately used and provide timely analysis and reporting at higher levels and locally.
6.3 Collating existing eye data sources		
To avoid unnecessary duplication, existing eye care data sources are identified and utilised.	**That sources of currently available eye health information are identified and drawn into a national eye health reporting framework.**	Data and eye health information from national sources are well managed, accessible and applied for eye health service improvements.
6.4 National benchmarks		
To ensure that national benchmarks are developed for the program to guide and support service delivery and create nationally consistent goals and approaches for eye care.	**That an appropriate expert committee be established to develop clear, evidence based, eye health sector agreed minimum standards and targets to support eye care service delivery for Aboriginal and Torres Strait Islander people.**	Implementation of eye health programs is nationally consistent and supported by a robust evidence base that supports identification of good practice and continuous improvement.
6.5 Quality assurance		
To ensure that services provide high quality eye care and that program management follows best practice.	**That measures of service quality and outcomes are developed and applied to Indigenous eye health.**	Service quality and satisfaction for eye health outcomes are consistent nationally and all services attain high quality ratings.
6.6 Primary health service self-audit in eye health		
To ensure Aboriginal Health Services can easily assess their ability to provide quality eye care and conform to national benchmarks in eye care.	**That an audit tool for Aboriginal Health Services be developed to support delivery of appropriate eye health services.**	All Aboriginal Health Services provide well integrated eye care.
6.7 Program evaluation		
To identify progress and outcome successes and share with the broader health system.	**That the 'Close the Gap for Vision' initiative is evaluated against program objectives, timelines and measures.**	The Gap for Vision is closed by 2020.

7 GOVERNANCE
to ensure that there is national delivery of 'Close the Gap for Vision'

INTENTION	RECOMMENDATION	OUTCOME
7.1 Community engagement		
To ensure eye care services are acceptable and have the full support of the local Aboriginal community.	**That eye services are developed and delivered with the engagement of the local community.**	Indigenous communities use and champion their eye care services.
7.2 Local Hospital Networks and Medicare Locals		
To ensure regional Indigenous eye care co-ordination is provided for within Local Hospital Networks and Medicare Locals.	**That local co-ordination of eye care is part of the responsibility of Local Hospital Networks and Medicare Locals.**	Eye health is well co-ordinated with other health services at a regional level.
7.3 State/Territory management		
To provide high level advisory and management committees to review the workings and achievements of local eye networks and to ensure that there is State/Territory government liaison. In particular to be able to identify areas where services are insufficient or not operating appropriately to meet community needs.	**That State/Territory Indigenous eye health managers are appointed and State/Territory Indigenous eye health committees are established to provide oversight and support for the Indigenous eye health system.**	Eye services within a State/Territory are performing at a high standard and achieving their objectives.
7.4 National oversight		
To provide continuity, oversight and accountability through monitoring national progress and assessing national priorities.	**That a National Oversight Body for Aboriginal and Torres Strait Islander eye health is established by government to oversee the implementation of strategies, develop national policy and funding for Indigenous eye health. Reporting to Commonwealth and State/Territory governments.**	National coverage, oversight and accountability is maintained with timely reports to government and to all service providers and stakeholders.
7.5 Program interdependence		
To ensure effective improvement in eye care, all the elements of this roadmap need to be implemented in a clear, branded and unified approach by government, the sector and the community.	**That the recommendations be regarded as a comprehensive package to be known collectively as the 'Close the Gap for Vision' initiative. Clearly articulated objectives, timelines and measures will need to be developed.**	'Close the Gap for Vision' recommendations be adopted and implemented across Australia and unnecessary vision loss is eliminated.

8 HEALTH PROMOTION AND AWARENESS to improve awareness and knowledge of eye health in communities to support self-empowerment		
INTENTION	**RECOMMENDATION**	**OUTCOME**
8.1 Eye health promotion		
To ensure that all community members and health service staff are aware of the importance of eye health.	**That an eye health promotion strategy aligned with 'Close the Gap for Vision' be developed within each State/Territory to improve community awareness of eye health.**	Community members recognise their own need for eye care.
8.2 Social marketing eye care services		
To ensure that all community members and health service staff are aware of the availability of eye health services (including dates of visiting services) and know how to access them.	**That strategies for marketing of local eye services including visiting services is established at the level of Local Hospital Networks, Medicare Locals and Aboriginal Community Controlled Health Organisations.**	Community members know about and are able to use eye services when they need them.

9 HEALTH FINANCING
to ensure adequate funding is allocated to 'Close the Gap for Vision'

INTENTION	RECOMMENDATION	OUTCOME
9.1 Current spending on Indigenous eye health (non Trachoma)		
To estimate the current annual amount spent on Indigenous eye health (non Trachoma).	**That the current annual total expenditure on Indigenous eye health (non Trachoma) is estimated to be $17.40 million and this is not adequate.**	Currently there is six times more blindness in Indigenous adults than in mainstream and the current resources are not sufficient to provide adequate eye care.
9.2 Current spending on Trachoma		
To estimate the current annual amount spent on Trachoma.	**That the current annual total expenditure on Trachoma elimination is estimated to be $4.5 million and this should be continued.**	Funding is continued until Trachoma is eliminated.
9.3 Full additional annual capped funding required*		
Estimate the additional capped funding required each year in service delivery for indigenous eye health to 'Close the Gap for Vision'	**That an estimated additional annual capped funding of $19.5 million is provided per year for Indigenous eye health.**	For every one dollar spent for eye care in Australia, there is a five dollar return to the community. Indigenous Cataract surgery will be increased 7 times, diabetic eye care increased 5 times and care of refractive error increased 2.5 times to reduce Indigenous blindness by 6 times.
9.4 Cost to 'Close the Gap for Vision' funded for 5 years*		
To estimate the additional five year forward amounts required for Indigenous eye health to 'Close the Gap for Vision'.	**That an estimated additional capped funding of $68.25 million is provided over five years for Indigenous eye health.**	This funding will 'Close the Gap for Vision'.

Additional capped funding required to 'Close the Gap for Vision' (2011 dollars in millions)*

	2012/2013 year 1 25% implementation	**2013/2014** year 2 50% implementation	**2014/2015** year 3 75% implementation	**2015/2016** year 4 100% implementation	**2016/2017** year 5 ongoing	**Estimate Five Year Total** five years
Commonwealth includes VOS, MSOAP	0.73	1.46	2.19	2.92	2.92	**10.22**
States/Territories includes State/Territory subsidised spectacle schemes, transport	0.50	1.01	1.51	2.01	2.01	**7.04**
Co-ordination includes Commonwealth and State/Territory Aboriginal Health Workers and other co-ordinator salaries	3.33	6.66	9.99	13.32	13.32	**46.62**
Governance and evaluation includes State/Territory and National committees and managers	0.31	0.63	0.94	1.25	1.25	**4.38**
Total	**4.88**	**9.75**	**14.63**	**19.50**	**19.50**	**68.25**

Information presented in this table is derived from 'The Cost of Closing the Gap for Vision', University of Melbourne 2011

***estimates do not include new or additional infrastructure costs**

Progress in Implementation

as of April 2013

Domain	Recommendation	Outcome
1 Primary Eye Care as part of Comprehensive Primary Health Care	1.1 Enhancing eye health capacity in primary health services	Education programs developed and implemented for practitioners and health workers
	1.2 Health assessment items include eye health	Medicare and computer software includes eye health assessment
	1.3 Diabetic Retinopathy detection	Medicare item for retinal photography
	1.4 Eye health inclusion in clinical software	Computer software includes eye health
2 Indigenous access to eye health services	2.1 Aboriginal Health Services and eye health	Specialist eye care delivered through AHS
	2.2 Cultural safety in mainstream services	Clinics and hospitals considered culturally safe
	2.3 Low cost spectacles	Nationally consistent scheme for Indigenous Australians
	2.4 Hospital surgery prioritization	Indigeneity prioritized for cataract surgery
3 Co-ordination – case management	3.1 Local Eye Care Co-ordination	Regional coordination arranged through Medicare Locals
	3.2 Clear pathways of care	Local referral pathways and service directories established
	3.3 Workforce identification and roles	Local personnel identified to support patient journey
	3.4 Eye care support workforce	Sufficient personnel engaged in eye care needs
	3.5 Case co-ordination	Case management for patients with diabetes or requiring surgery
	3.6 Partnership and agreements	Local and regional agreements established
4 Eye health workforce	4.1 Provide eye health workforce to meet population needs	Population-based needs determine eye health workforce across Australia
	4.2 Improve contracting and management of visiting services	VOS and MSOAP work effectively and properly coordinated
	4.3 Appropriate resources for eye care in rural and remote areas	Services are adequate to meet eye care needs
	4.4 Increase utilization of services in urban areas	VOS supports AHS eye care in both regional and urban areas
	4.5 Billing for visiting MSOAP supported services	MSOAP services are bulk-billed
	4.6 Rural education and training of eye health workforce	Training opportunities are included and funded for optometry and ophthalmology
5 Elimination of Trachoma	5.1 Definition of areas of risk	Areas with trachoma are defined across Australia
	5.2 Effective interventions	SAFE strategy is implemented
	5.3 Surveillance and evaluation	Ensure continuance of NTSRU
	5.4 Certification of elimination	Australia eliminates trachoma
6 Monitoring and Evaluation	6.1 Managing local eye service performance	Performance is assessed against need-based targets
	6.2 State and National performances	State and national data are analysed and reported
	6.3 Collating existing eye data sources	Existing data sources are used to review service needs and performance
	6.4 National benchmarks	National benchmarks and guidelines are established and used
	6.5 Quality assurance	High quality service is achieved
	6.6 Primary health service self audit in eye health	Services can easily determine needs and performance
	6.7 Program evaluation	Implementation of Roadmap is evaluated
7 Governance	7.1 Community engagement	Local communities use and champion eye care services
	7.2 Local Hospital Networks and Medicare Locals	Indigenous eye health is coordinated at the regional level
	7.3 State/ Territory management	State/territory Indigenous eye health committees operate effectively
	7.4 National oversight	National Indigenous eye health oversight body reports to AHMAC
	7.5 Program interdependence	Roadmap is effectively delivered across Australia
8 Health promotion and awareness	8.1 Eye health promotion	Community and staff recognize the need for eye care
	8.2 Social marketing eye care services	Community and staff know about local services
9 Health financing	9.1 Current spending on Indigenous eye health	Current services are maintained
	9.2 Current spending on trachoma	Funding continues until trachoma is eliminated
	9.3 Full additional annual capped funding required	Adequate capped funding provided (est. $19.5m pa)
	9.4 Cost to Close the Gap for Vision funded for 5 years	Additional funding continues until the gap for vision is closed

Action completed

AIHW Australian Institute of Health and Welfare; **CQI** Continuous Quality Improvement; **DoHA** Department of Health and Ageing; **FHF** Fred Hollows Fo
Optometrists Association Australia; **RACGP** Royal Australian College of General Practitioners; **RANZCO** Royal Australian and New Zealand College of Op
Council on Koori Health. **Input from FHF, VCRC and DoHA is acknowledged.**

Current Action		
Two RHEF programs and DVD	NACCHO/RACGP preventative health guidelines	Web-based module to be developed
Included in NACCHO/RACGP and CARPA/CRANA guidelines	Adult/Older Person Health Checks include mandatory vision assessment	Computer software to support eye health – software roundtable to be organised
More demonstration projects underway	MSAC application currently being processed	
Patient and audit software being developed	Software roundtable arranged for late April 2013	
FHF/Oxfam DVD 2012	Pilot project suggested for optometry	
Programs available in most states	Cultural competency training required within MSOAP, VOS and with Medicare Locals	Implementation being progressed
VCRC/OAA national review. NT program re-contracted	Nationally consistent subsidized spectacle scheme criteria developed and sector agreed	VIC good review – 2013 funding uncertain. NSW funding temporarily stopped in 2012
Surgical blitzes used to reduce back logs	Sustainable solutions being discussed	
Indigenous eye health used as a case study for the DoHA Medicare Local Collaborative Framework	NSW planning in Western Region, VIC, NT in 3 regions	
DoHA Medicare Local Collaborative Framework project	DoHA is considering processes that could be used to improve co-ordination	
Initial steps to assess NSW, NT, VIC		
NT community workers trial		
DoHA assessing role of Chronic Disease co-ordinators		
Some partnership agreements established in NT, NSW, VIC regions		
Estimations for selected regions		
MSOAP and VOS review released	Linkage between MSOAP and VOS with ML and LHN	Medicare Local Collaborative Framework project evidences Indigenous eye health
Eye care skills and regional planning being developed		
USOAP includes some allied health		
DoHA considering appropriate strategy		
NSW western region trial	VOS to include optometry training support	
NT, WA and SA completed mapping	QLD and NSW partially resolved	
Good progress in NT, WA and SA	QLD and NSW pending	National guidelines being revised
NTSRU report 2010 published	NTSRU report 2011 prepared	
Australian Government commitment made to eliminate trachoma		
Regional and local benchmarks and service targets being developed		
Indicators endorsed by eye sector stakeholders	Inclusion of regional data in NHPA reports	Indicators included in National Framework Implementation Plan
Discussions with DoHA and AIHW		
Eye Health Measure in Aboriginal and Torres Strait Islander Health Performance Framework 2012	Indicators endorsed by stakeholders	Include eye health in NHPA and other frameworks
CQI tool being developed		
Audit tool being developed		
Annual progress report 2012 published	Annual progress report and Roadmap updated	
Multiple local services encouraging eye care		
Roadmap available as resource	DoHA Medicare Local Collaborative Framework project	
VIC VACKH committee operating with state purview, developed Strategy for 2013-2014	NT plans for 3 regions developed	
Informal national group formed, NACCHO, OAA, RANZCO, Vision 2020 Australia, Uni. Melbourne	Advocacy to Government to establish national oversight body	
Vision 2020 Australia advocating for full implementation of the Roadmap		
FHF/Oxfam/NACCHO/VACCHO digital stories	Material developed by AHS and NGO	
Trachoma social marketing	DoHA considering integration of health messaging	
No cuts to current spending		
It is likely that funding will continue beyond the current commitment to 2012/2013		
Vision 2020 Australia and OAA funding bids for 2013/2014		

Action initiated **No action to date**

oundation; **LHN** Local Hospital Network; **ML** Medicare Local; **MSAC** Medical Services Advisory Committee; **NHPA** National Health Performance Authority; **OAA** hthalmologists; **RHEF** Rural Health Education Foundation; **VACCHO** Victorian Aboriginal Community Controlled Health Organisation; **VACKH** Victorian Advisory

Activities for Commonwealth

The Roadmap to Close the Gap for Vision requires full funding and implementation, but by giving priority to the following activities the Commonwealth can progress specific Roadmap recommendations within existing programs.

1. National oversight and accountability reporting to AHMAC

› National body reporting to AHMAC, eg Australian Population Health Development Principal Committee
› State Forums (Fora), OATSIH's role
› National Oversight Body for Aboriginal and Torres Strait Islander eye health to provide expert, technical, and policy advice and recommendations to federal and jurisdictional governments.
› Report to a principle committee of Australia Health Ministers Advisory Council (AHMAC) and State forums

2. Provide National leadership

› Establish benchmarks and nationally consistent reporting
› Establish clinical pathways and standards of care
› Support jurisdictional activity

3. Medicare Local inclusion of eye health (Indigenous)

› Work closely with ACCHOs
› Assessment of local eye care capacity
› Service directory and referral protocols
› Assessment of additional VOS and MSOAP needs
› Co-ordination and case management needs
› CTG/ ICD chronic disease co-ordinators, eg diabetic eye exams

4. Reform MSOAP and VOS planning and co-ordination

› Co-ordination between programs
› Linkages with ACCHOs
› Population-based planning
› MSOAP bulk billed
› Urban VOS
› Report on number of Indigenous services provided

5. Low cost spectacle services

› Nationally consistent, best practice and adequate

6. Diabetes retinal exams

› Medicare item number for non-mydriatic retinal photography

7. Trachoma

› Continuation of support

8. National performance indicators (by Indigeneity and by region)

To be included in National Health Performance and Regional Reports

Refractive Error:

› Number of people and percentage of people who have had an eye examination
› Number of spectacles provided

Diabetes:

› Number and percentage of people with diabetes who have had a retinal examination within the past 12 months
› Number of patients who received DR laser treatment
› 3.04[1] Chronic disease management
› 3.16[1] Care planning with chronic diseases

Cataract:

› Number of patients who have received cataract surgery and cataract surgery rate
› Number of patients on waiting list for surgery
› Number of patients on waiting list for surgery for more than 90 days
› 3.05[1] Differential access to hospital procedures: cataract surgery
› 3.12[1] Access to services: waiting time for elective surgery, cataract surgery

1. AIHW. Aboriginal and Torres Strait Islander Health Performance Framework 2010. Canberra: Australian Institute of Health and Welfare.

Activities for Jurisdictions

By giving priority to the following activities, jurisdictions can progress the implementation of the Roadmap recommendations.

1. **Define regions-** Planning to use the Department of Health and Closing the Gap regions.
2. **Define population size and regional needs-** Initial needs estimates use 2011 Census data and provide a starting point for planning. They can be revised as new regional data become available. The prevalence data from the National Indigenous Eye Health Survey provide first order estimates of population-based needs.
3. **Identify regional hub hospitals-** In consultation with State/Territory Forum[2] identify hospitals in the regions where public cataract surgery is to be performed in each region.
4. **Initial implementation-** In consultation with State/Territory Forum and the Closing the Gap committees, select up to three regions in which to implement this planning in the first instance.
5. **Develop regional service directories-** Determine current levels of service provision and the capacity of locally available services within each region.
6. **Identify service gap-** Use data from 2 and 5 to determine additional services required. Look to VOS and MSOAP support if additional services are required.
7. **Establish regional collaboration network-** Include the Closing the Gap committee and other bodies in each region – State/ Territory Forum to provide state-level support.
8. **Develop referral protocols-** Assist development of regional referral protocols to be determined by regional collaboration network.
9. **Co-ordination and case management-** The identification of staff and the allocation of roles and responsibilities needs to occur at the clinic, hospital and regional levels with regional oversight.
10. **Data collection and monitoring-** Develop regional reporting and performance review systems using national performance indicators.
11. **Performance review-** Regional data reported and reviewed every six months to State/Territory Forum.

2. State/Territory Forum is made up of State/Territory Health Department, Federal Department of Health and Ageing and local Aboriginal Community Controlled Health Organisation.

Planning the Pathway of Care

Eye Care Co-ordination and Service Requirements for a 'Region' and a 'Community'

		'Region' of 10,000 people					'Community' of 500 people			
		Community (days)	Visiting Service (days)	Hospital (days)	Total (days)	EFT	Community (days)	Visiting Service (days)	Hospital (days)	**Total (days)**
Optometry Clinics										
Patient organisation	2 hr/pt (specs 1 hr)	532			532	**2.5**	26.6			**26.6**
Transport	1 hr/patient	308			308	**1.5**	15.4			**15.4**

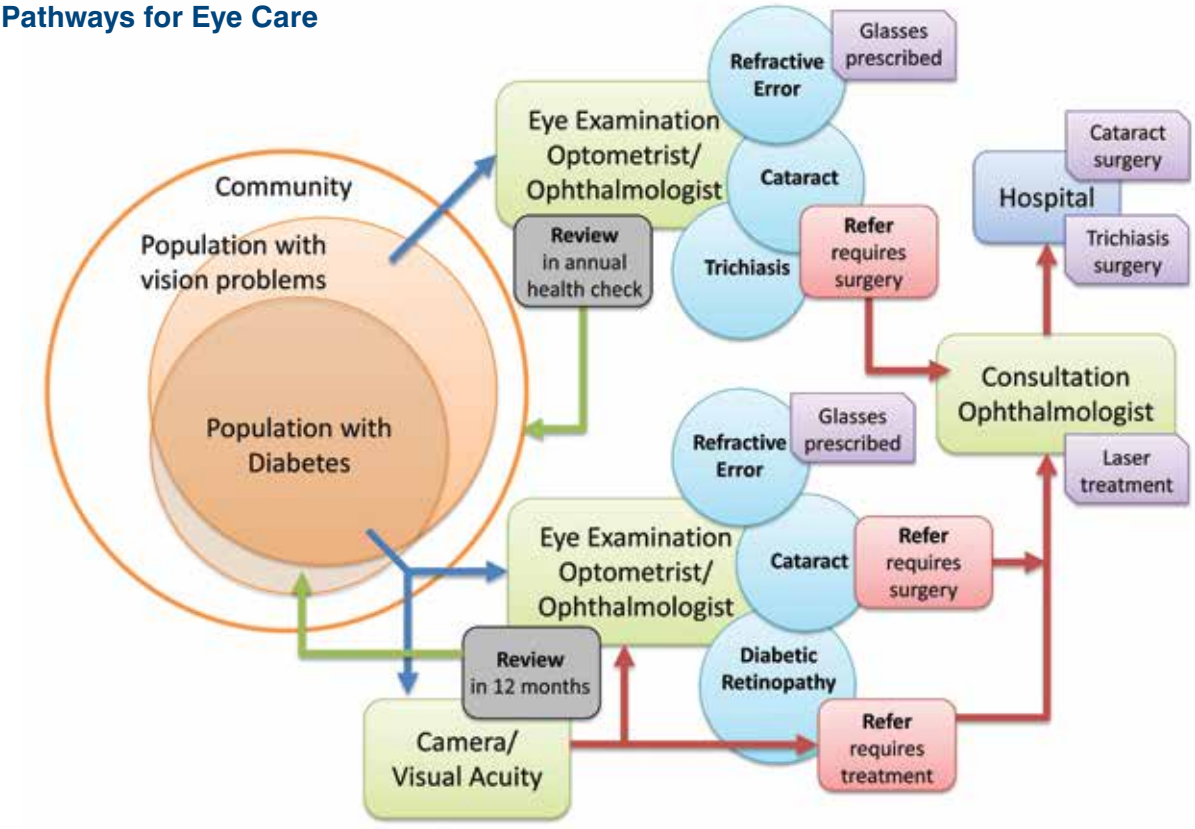
The Pathways for Eye Care



Glossary

In this document, the terms Indigenous and Indigenous Australians are used to refer to all Aboriginal and Torres Strait Islander people.

National Indigenous Eye Health Program Structure

Local Eye Health	Incorporates all eye care services and providers, local and visiting, delivering comprehensive eye care services to meet community requirements and based around a regional hospital with capacity to conduct Cataract surgery
Regional Eye Health Co-ordinator	Responsible for co-ordination of eye health services to Aboriginal and Torres Strait Islander communities in a geographic area
State/Territory Indigenous Eye Health Manager	An individual or organisation responsible for collating eye health program data and information about local eye co-ordination from Regional Eye Health Co-ordinator, Local Hospital Networks and Medicare Locals within jurisdictional boundaries
State/Territory Indigenous Eye Health Committee	Incorporates existing State/Territory Indigenous eye health committees, organisations and other stakeholders, appointed to support and oversee Indigenous eye health activity and performance in Local Hospital Networks and Medicare Locals within jurisdictional boundaries and reports to the National Indigenous Eye Health Committee
National Oversight Body	Committee established by the Commonwealth Government to oversee and monitor progress on National Indigenous Eye Health, incorporating existing national advisory committees and other stakeholders and reports to AHMAC

Australian Government's National Health Reforms

Local Hospital Networks	State funded networks of hospitals responsible for making decisions on the day to day operations of hospitals and delivering agreed services
Medicare Locals	62 organisations contracted by the Commonwealth Government to improve primary health services for local communities
Lead Clinician Groups	National and local groups appointed to provide clinical leadership on delivery of safe and higher quality care, consistent with evidence based clinical practices and service delivery
