

## DATA VISUALISATION FOR KNOWLEDGE TRANSLATION

Presented by Alana Pirrone, The Jack Brockhoff Child Health & Wellbeing Program

Tuesday 27th February 2018

Seminar Room 516, 207 Bouverie Street

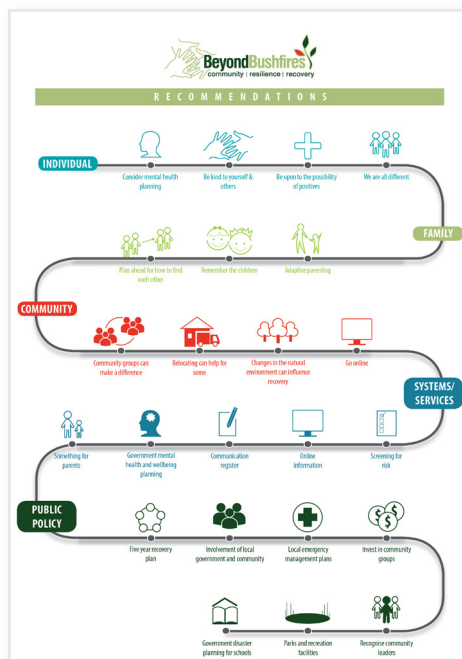

10am

Alana Pirrone is a Design and Communications Officer for The Jack Brockhoff Child Health and Wellbeing and Public Health Insight at The University of Melbourne. She specialises in data visualisation for knowledge translation. She runs a consultancy service through the University and is currently planning a short course for 2018. This year Alana has attended three workshops with international industry experts Edward Tufte, David McCandless and Andy Kirk.

Alana completed her Bachelor of Health Science in 2007 with a triple major in Nutrition, Exercise Behaviour and Families, Society and Health. In 2008 she completed Honours with the School of Health and Social Development at Deakin University. In 2014, Alana completed her Certificate 4 in Graphic Design.

**Data Visualisation for Knowledge Translation will look at two areas of design and presentation.**

Firstly, it will explore key design principals for creating effective and visually stunning PowerPoint presentations used for seminars, conferences and teaching. We will move away from traditional approaches of creating presentations to using creative techniques which will engage your audience. Please feel free to bring along slides that you would like assistance with or have questions about.

Secondly the session will look at ideas on how to present your research data visually. This will include what makes a good infographic or visualisation and how to produce easy design elements.
